Join us for a tour of New Age Robotics & Controls which has become highly competitive in the area of robotic automation. Main products include turnkey robotic cells for MIG, spot & projection welding and material handling; concepts & capital costs for customers seeking automation with robots and automated tool design. Services include customized system design and installation, refurbished equipment integration and ongoing support. Their 30,000 sq. ft. facility is fully equipped, using the latest technology to create and maintain flexible automation systems. Memex Automation will demonstrate manufacturing flexibility and efficiency using their controls that have been installed on CNC equipment and robots performing multiple tasks of loading different parts for machining with different part programs.

“MACHINE MONITORING FOR PRODUCTIVITY IMPROVEMENT”

Presentation By: *CEO of Memex Automation Inc.*

Automate your automation using Ethernet connectivity to “InterNetwork” all your machines on the factory floor. Using a Universal Machine Interface, computerized networking for machine monitoring and control can provide manufacturers with relevant OEE metrics and production information in real-time, boosting efficiency by up to 20 percent with minimal capital investment and thereby enabling lean manufacturing techniques. A demonstration will precede the presentation with the plant tour at New Age Robotics.
